Art Unit: 1714

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-14, 16, 18 and 19 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The rejection is maintained for reson of record and following.

Applicant's declaration has been considered, but found unpersuasive as following; 1. The instant invention recites 10 to 5000 ppm of an conducting polymer, however, the figure 2 of said declaration only shows up to 4000 ppm. And thus, it does not cover whole scope of the claim. 2. Applicant states that a very strong magnification would yield an image that seems to be homogenuous which was stated by the examiner earlier. Contrary to applicant's assertion, there is no teaching of how to measure the recited heterogeneity on a scale of 0.1 µm. For example, it is unclear whether the width of entire picture field is 0.1 µm or one tenth of the width of entire picture field is 0.1 µm which would show different heterogeneity (or homogeniety). 3. A statement regarding AFM has little probative value since it was not disclosed in the originally filed specification and no particular method is recited.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 09/786,985

Art Unit: 1714

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14, 16, 18 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited "whose heterogeneity on a scale of 0.1 µm or less, as observed under scanning electron micrograpy (SEM)" is indefinite absent a particular method or magnefication. See also obove.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-11, 14, 16 and 18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Conn et al (WO 96/21694).

The rejection is maintained for reason of record and following.

As pointed out above, the instant invention recites 10 to 5000 ppm of an conducting polymer, however, the figure 2 of said declaration only shows up to 4000 ppm. And thus, it does not cover whole scope of the claim. 2. Besides, said table 2 clearly shows that the smaller amount taught by Conn et al, 1,000-4,000 ppm, would yield stable values of dielectric loss.

Claims 1-9, 11-14, 16 and 18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Han et al (US 5,254,633).

Rejection is maintained for reason of record and following.

Han et al clearly teach employing 0.1 wt% (1,000 ppm) conductive polymer at col. 2. lines 40-44 which is an anticipation. Applicant points to claim 2 of Han et al and asserts that such material cannot be used to insulate a cable, however, the intended use, insulation, has little probative value absent a particular conductivity. Also, the instant specification failed to teach any conductivity for the intended insulator, and a conducting material or insulator is defined by users contrary to applicant's assertion. With respect to claim 3 of Han et al, claim 2 recites doping which meets the instant conducting polymer.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Application/Control Number: 09/786,985 Page 5

Art Unit: 1714

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tae H. Yoon whose telephone number is (703) 308-2389. The examiner can normally be reached on Monday to Thursday from 8:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on (703) 306-2777. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
